

Theme Park, USA

Project Fast Fact

Location

Florida, U.S.

Complete year

1971

Architect

Michael Graves

Operator

Walt Disney World
Company

Owner

Walt Disney World
Company

Feature products

automated and secure
electronic solution

Challenge

Most employees access hospitality areas, hotel rooms, corporate facilities, maintenance vehicles and equipment with mechanical keys or key cards. The challenge for Traka was to provide an automated electronic process for key management with increased security, accountability and efficiency, managed from a centralized database.

Solution

Traka provided a network of 180 electronic key cabinets and intelligent locker to control access to and monitor 9,000 keys. The Traka administration software is hosted on a centralized server and system administrators have "regionalized" access to administer and run reports on keys and equipment.

Employees access Traka key cabinets with their existing employee badge and are only allowed to release the keys they are authorized to. If keys are not returned on time, software alarms notify the system administrators. As an extension to the theme park the customer has now implemented Traka key control in each of its four cruise vessels as well and at other properties including sites in Hawaii. ASSA ABLOY has also installed HID Global iCLASS access control cards, readers and ID card printers.
