

National Property Board, Sweden

Project Fast Fact

Location

Switzerland

Complete year

1993

Architect

wingardh
arkitektkontor

Owner

Sweden Government

Feature products

CLIQ

Challenge

Far too many keys had been going missing – even master keys. That’s why Mickael Andersson at the National Property Board, Theaters and Museums, decided to replace all of the lock cylinders in the utility rooms of these vintage buildings with the ASSA CLIQ lock system.

Solution

With ASSA dp CLIQ, access to doors can be controlled as specific keys can easily be blocked. Andersson wanted that feature throughout, and therefore chose to install ASSA dp CLIQ cylinders everywhere. Installation of the new locking system in the buildings that Andersson is responsible for will soon be completed. Roger Carlsson, the facility services manager in charge of locks and keys, is planning suitable access routes for different types of contractors.

ASSA dp CLIQ is safe and simple – and that’s why he chose it. If someone loses a key, it’s easy to block it, instead of replacing the entire lock system – which would be expensive.
