

Sengkang Hospital

Project Fast Fact

Location

Singapore

Complete year

2018

Owner

Ministry of Health

Architect

DP Architects

Main Contractor

Penta-Ocean

Feature products

Mechanical Key System

Project Details

Sengkang are expected to add about 1,400 beds to the national healthcare system and they will be the largest hospital development to date. Slated for completion in 2018, the Sengkang General and Community Hospitals are part of the Ministry of Health's Healthcare 2020 Master Plan to expand the national healthcare capacity. With the community and acute hospital sitting side-by-side, they will provide residents in the north-east region — especially those in Sengkang, Punggol, Hougang and Pasir Ris — with easier access to healthcare services.

Solution

The complexity in healthcare development will require all areas in the premises to have highest mechanical security. ASSA ABLOY Singapore has the solution using MUL-T-Lock MT5+ high security key and cylinder with 160 millions of combinations enabled by triple locking mechanism.
