

Zhengzhou Airport, China

Project Fast Fact

Location

Zhengzhou, China

Complete year

2020

Owner

Chinese government

Feature products

Hardware
Fire doors

Challenge

The goal was to devise a comprehensive door-opening solution for a project that includes the construction of two more terminals and two more runways by 2020. The passenger flow is expected to rise to 29 million travelers per year, 0.2 million passenger aircraft and half a million cargo jets will travel to the airport annually.

Solution

ASSA ABLOY China's complete, optimized, flexible, cost-efficient security solution impressed the customers and the architects— particularly given the current economic situation in China and the durability requirements. We offered a mix of ANSI (US) and EN (European) standard products. The customer was equally satisfied with our team's responsive communication efforts.

Some 2,000 fire and steel doors and 4,000 sets of hardware secure the terminals, with 49 2.8m-high super-size ASSA ABLOY branded fire doors for the huge entranceways. Products include Yale ANSI standard locksets, door closers and exit devices, and Doormax EN standard floor springs and door accessories.
